## (54) DETECTOR FOR MILLIMETER WAVE

## (57)Abstract:

**PURPOSE:** To obtain an inexpensive detector of a millimeter wave whose manufacture is easy with excellent mass-productivity with respect to the structure of the detector for a millimeter wave including an antenna for a millimeter wave band.

**CONSTITUTION:** A ground conductor film 2 and a dielectric film 3 are laminated on a 1st silicon-made semiconductor board 1, a plane antenna 4 and a feeding microstrip line 7 are formed on the dielectric film 3, and a 2nd gallium arsenide semiconductor board 5 on which a detection circuit is formed is mounted by a Phillips chip mount. Thus, an inexpensive silicon material is used for a part with a large area and expensive gallium arsenide is used for only an active element of a millimeter wave band to realize the detector inexpensively while keeping the high manufacture precision being a requirement for a millimeter wave band.

## LEGAL STATUS

[Date of request for examination] 19.02.1998

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3141692

[Date of registration] 22.12.2000

[Number of appeal against examiner's decision of rejection]
